

# Hematopoietic Stem Cell Therapies in TURKIYE

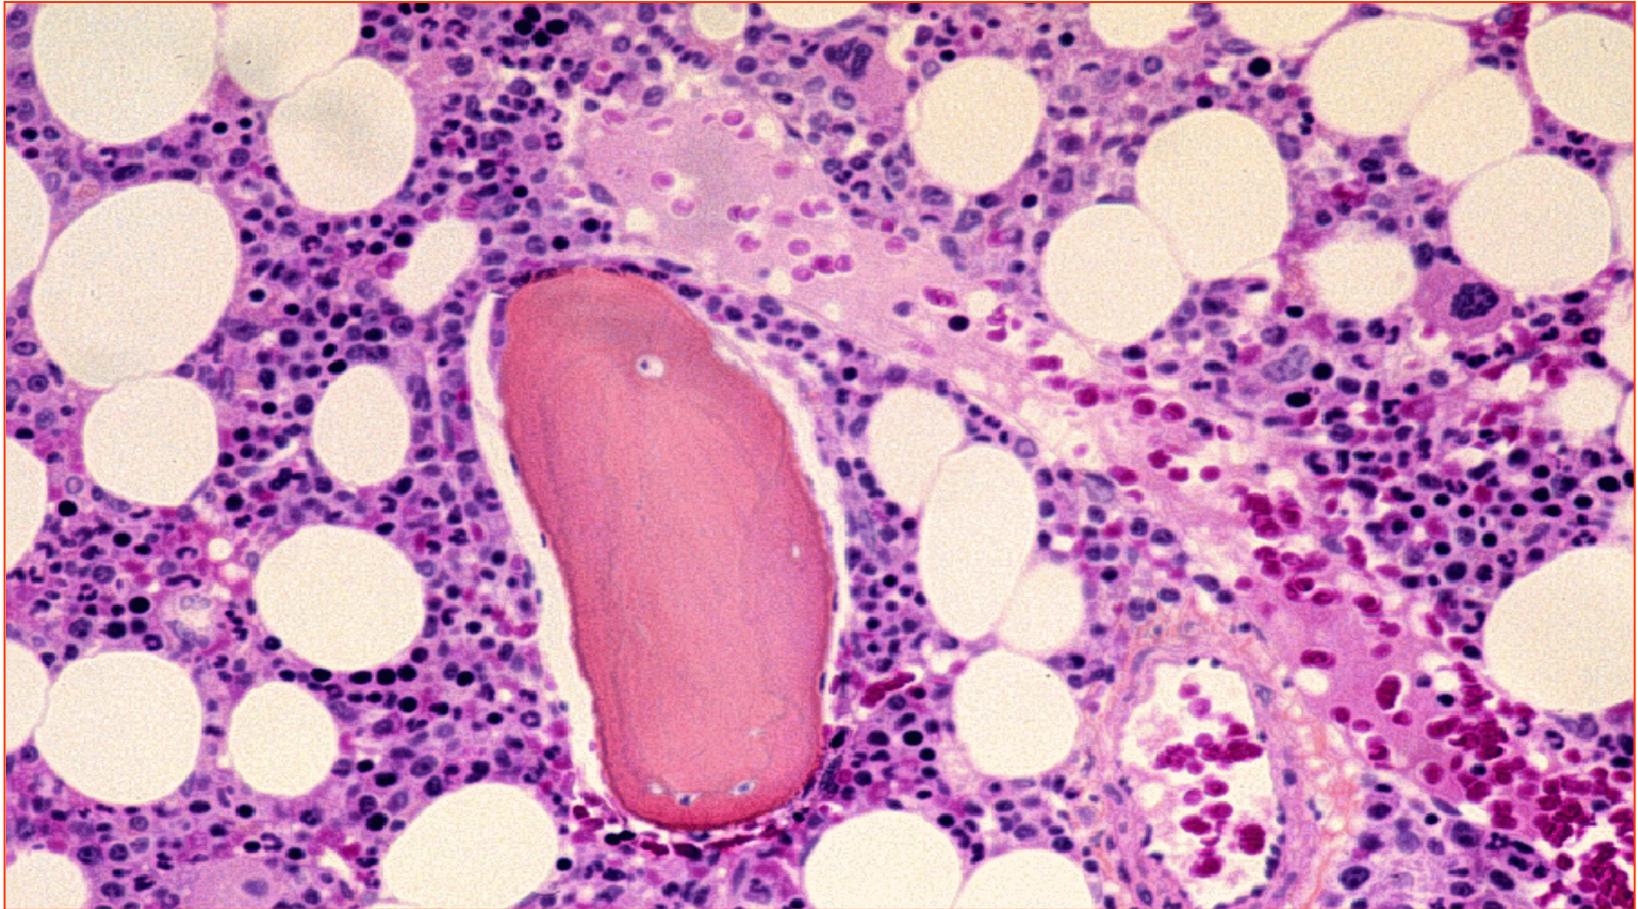

World Location of transplant centers  
participating in CIBMTR (2010)

Mustafa CETIN, M.D.  
Erciyes University Medical Faculty  
Kayseri-TURKIYE

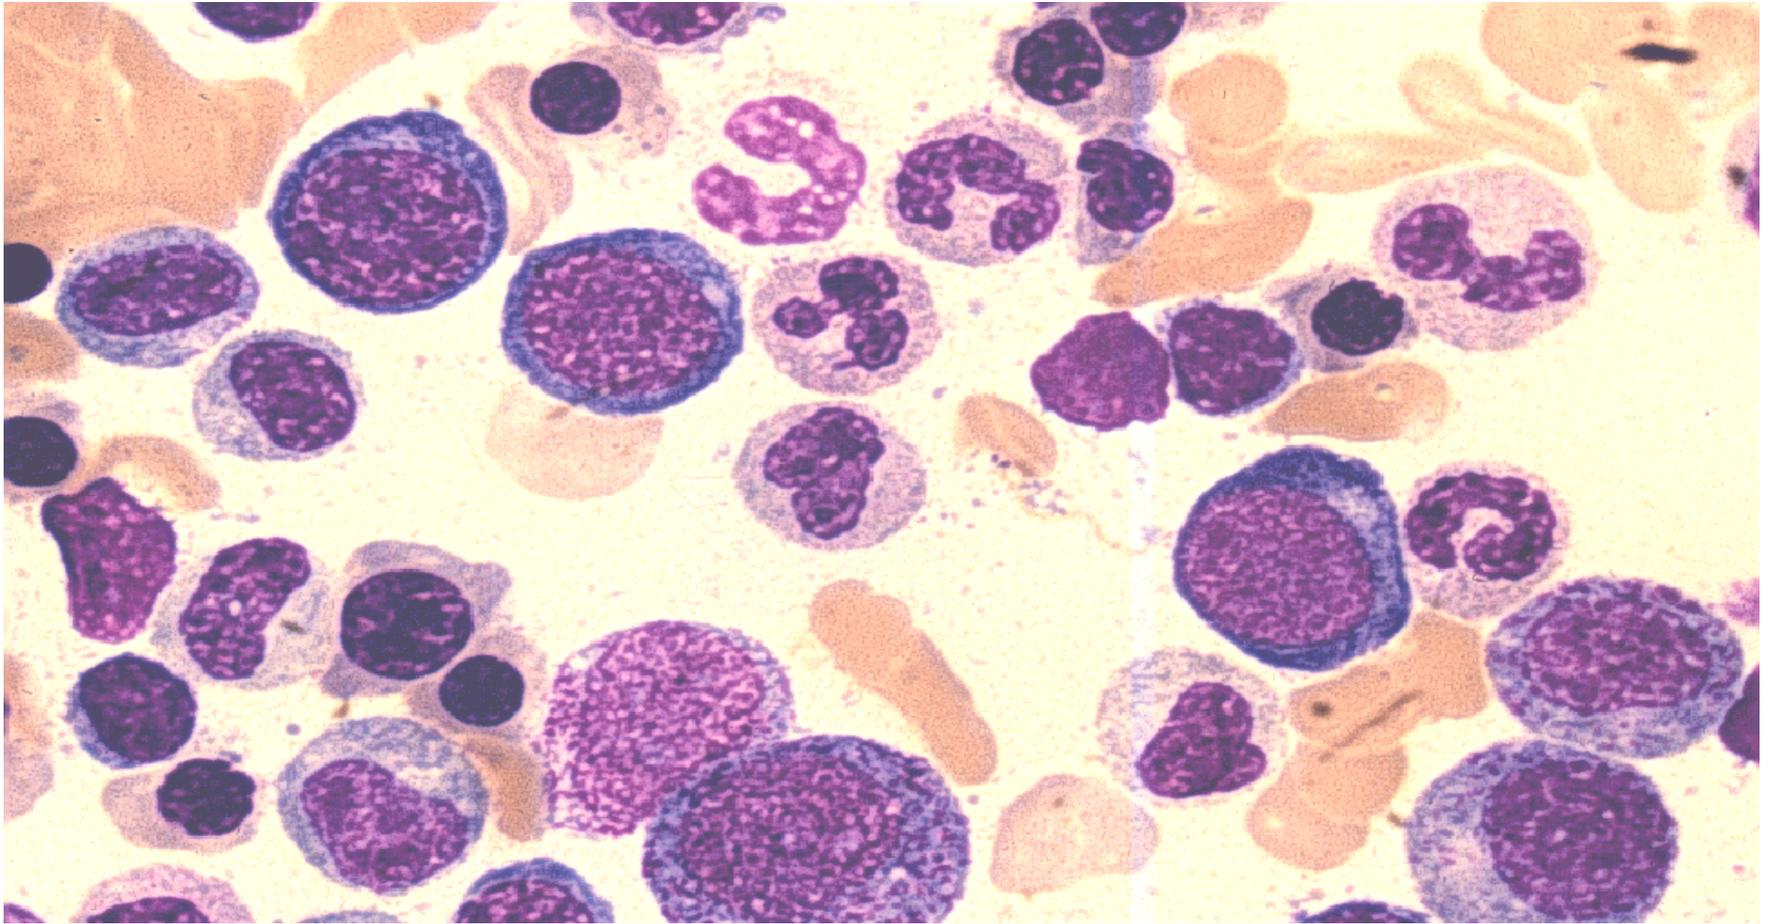

# *Background*

- Bone Marrow Function
- Hematopoietic Stem Cell (Bone Marrow) Transplantation
- Hematopoietic Stem Cell Therapy Results
- Transplantation Activity Survey (Europa & US & World)
- Transplantation Activity Survey (TURKIYE)
- Transplantation Activity Survey (ERCIYES)

# *Bone Marrow: Function*

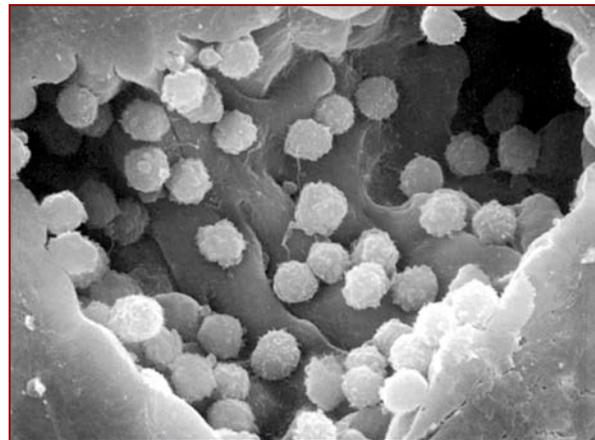

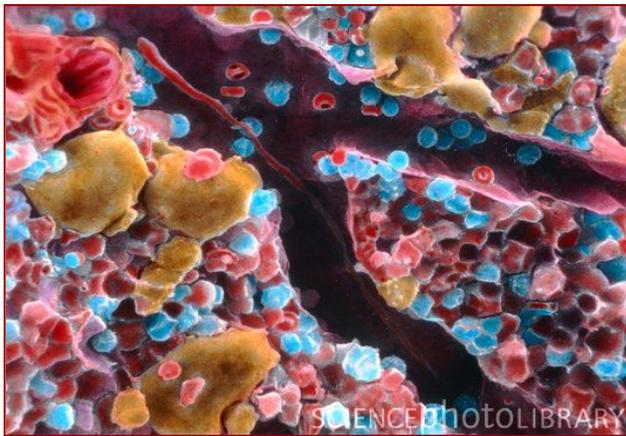

# *Bone Marrow: Function*

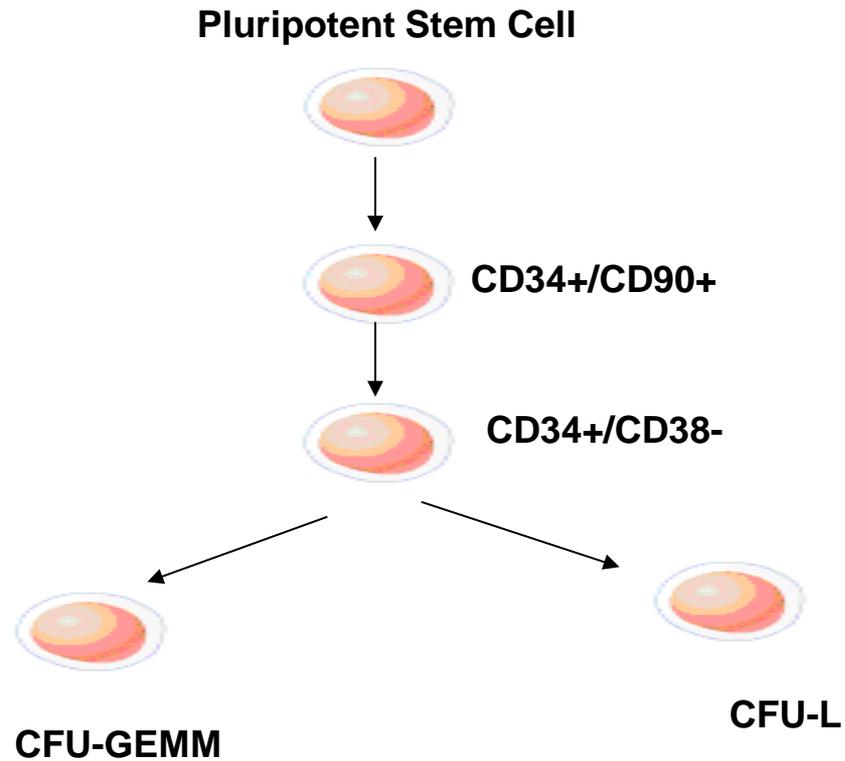

# *Bone Marrow: Function*

- Production of blood cells,
  - 175 billion red cells/day
  - 70 billion granulocytes/day (neutrophils, eosinophils, basophils)
  - 175 billion platelets/day
  - Capable of 5-10 fold increase in production

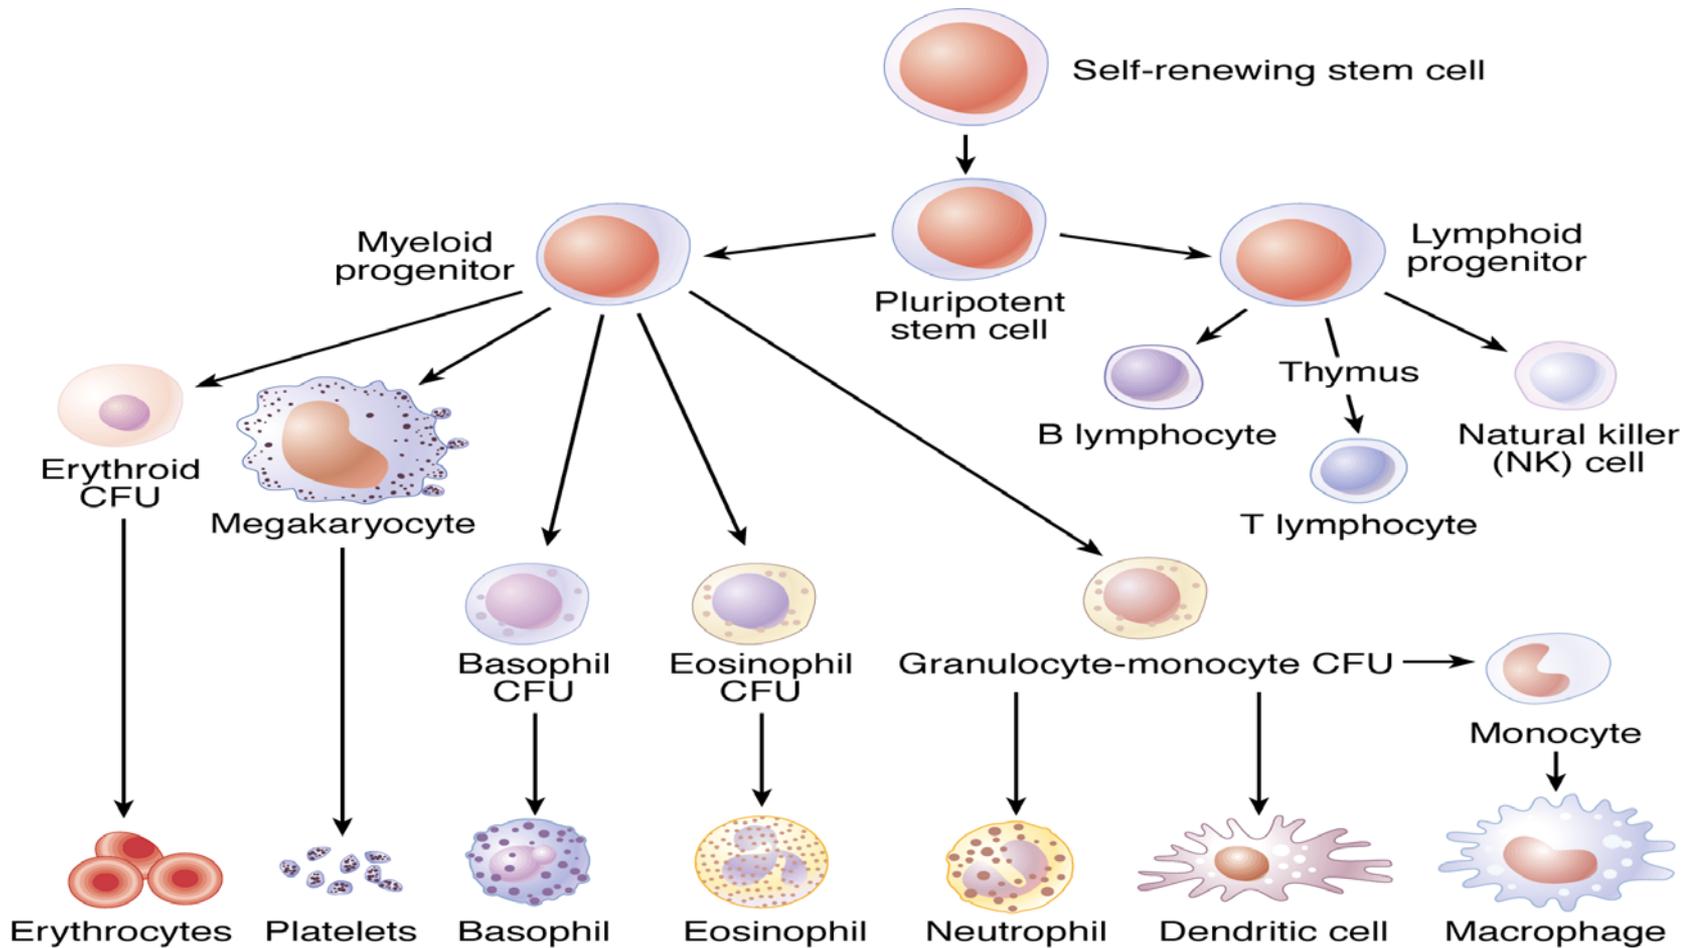

1- 0.1% human  
bone marrow  
cells are early  
hematopoietic  
cell precursors

# *Experimental Model of Early Hematopoiesis*

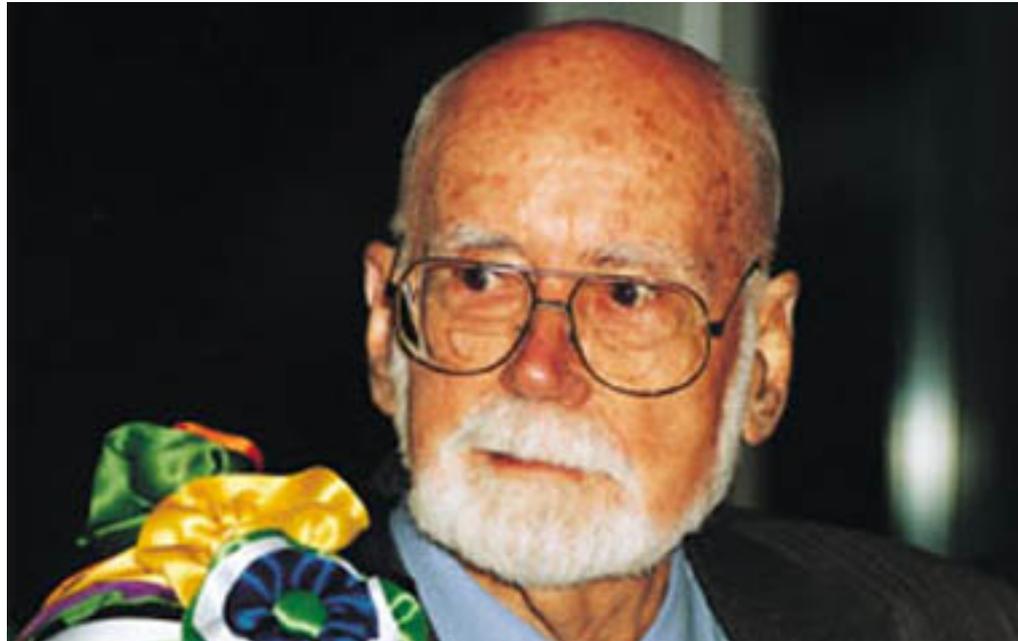

# Bone Marrow hematopoiesis

The Nobel Prize, 1990

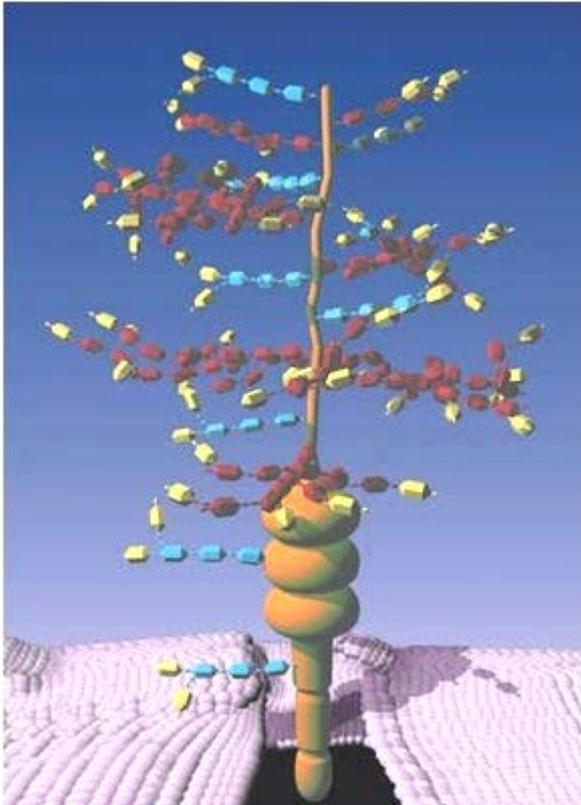

E. Donnall Thomas

first successful clinical HSCT in treatment of acute leukemias

*Thomas ED, Lochte HL, Lu WC, Ferrebee JW. Intravenous infusion of bone marrow in patients receiving radiation and chemotherapy. N. Engl. J. Med. 1957; 257: 491.*

# What is CD 34 anyway ?

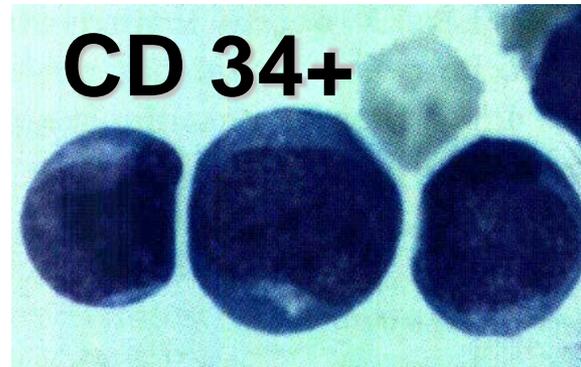

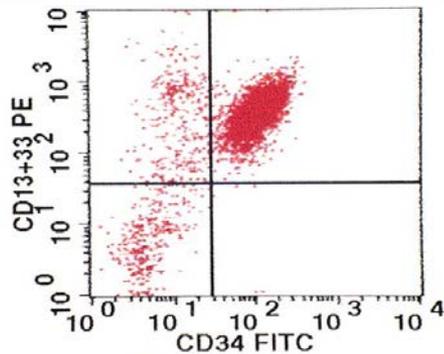

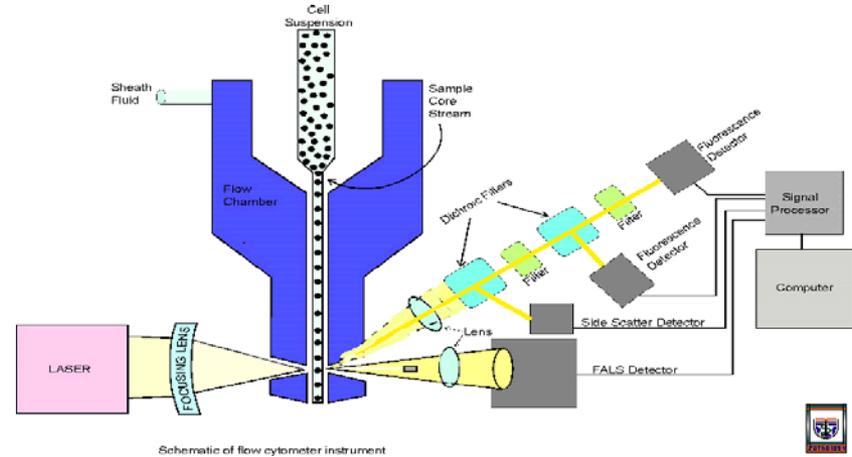

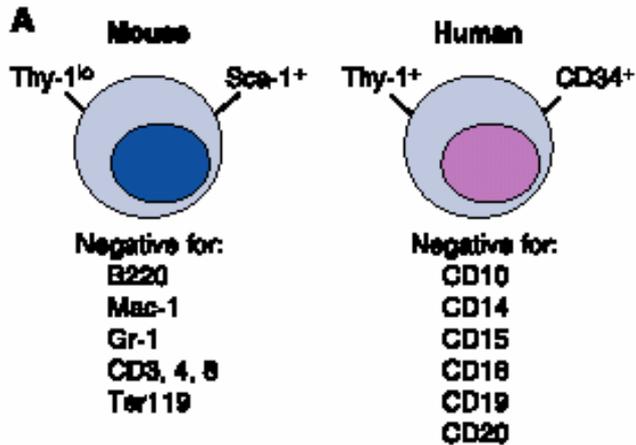

- 105-120 kDa transmembrane Glycoprotein
- Present in early hematopoietic cell precursors
- Present in 0.1% of peripheral mononuclear cells  
1-4% human bone marrow cells

**Probably an adhesion molecule.**

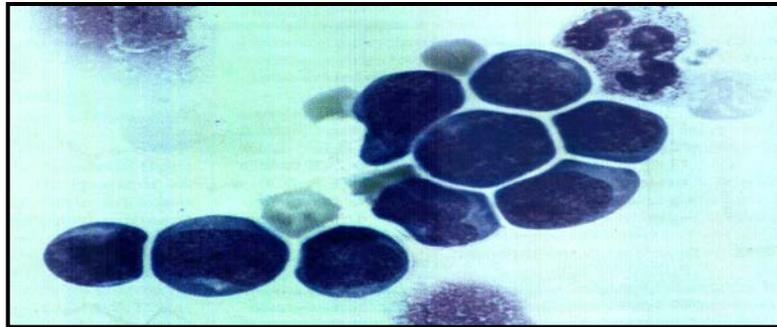

# Hematopoietic stem cell (immunophenotyping)

CD34+, Thy1+, CD38-, HLA-DR-, c-kit+, Lin-, AC133+, CD33-, CD4-, CD8-, CD14-, CD19-,

# *Hematopoietic stem cell harvesting*

**How can we get CD34+  
hematopoietic stem cell ?**

- Bone marrow harvesting
- Peripheral blood harvesting

# *Bone marrow harvesting*

- General anaesthetic
- Marrow aspirated from pelvis  
(+sternum)
- Marrow filtered to remove debris
- Marrow may be administered  
“fresh” or cryo-preserved

# Peripheral blood harvesting

- **Stem cells mobilised –**
  - G-CSF in healthy donors
  - Cyclophosphamide + G-CSF in patients
- **On day 5 (donors), day 10 (patients)**
  - 3 hours session on stem cell collection machine
- **Stem cells given fresh or cryopreserved**

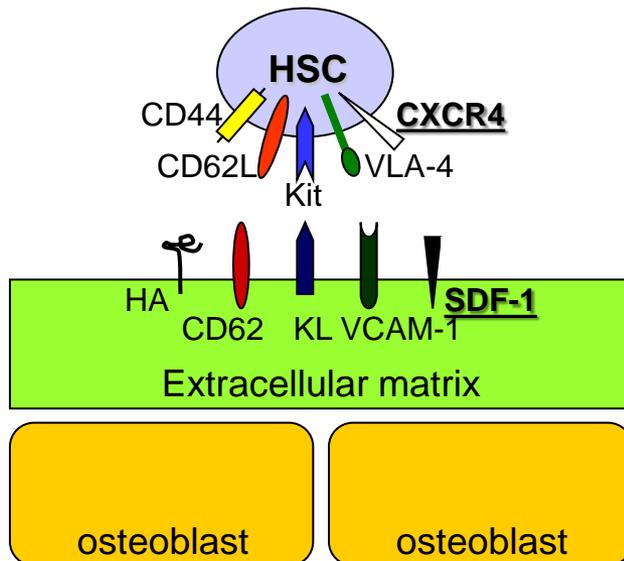

# G-CSF mobilization

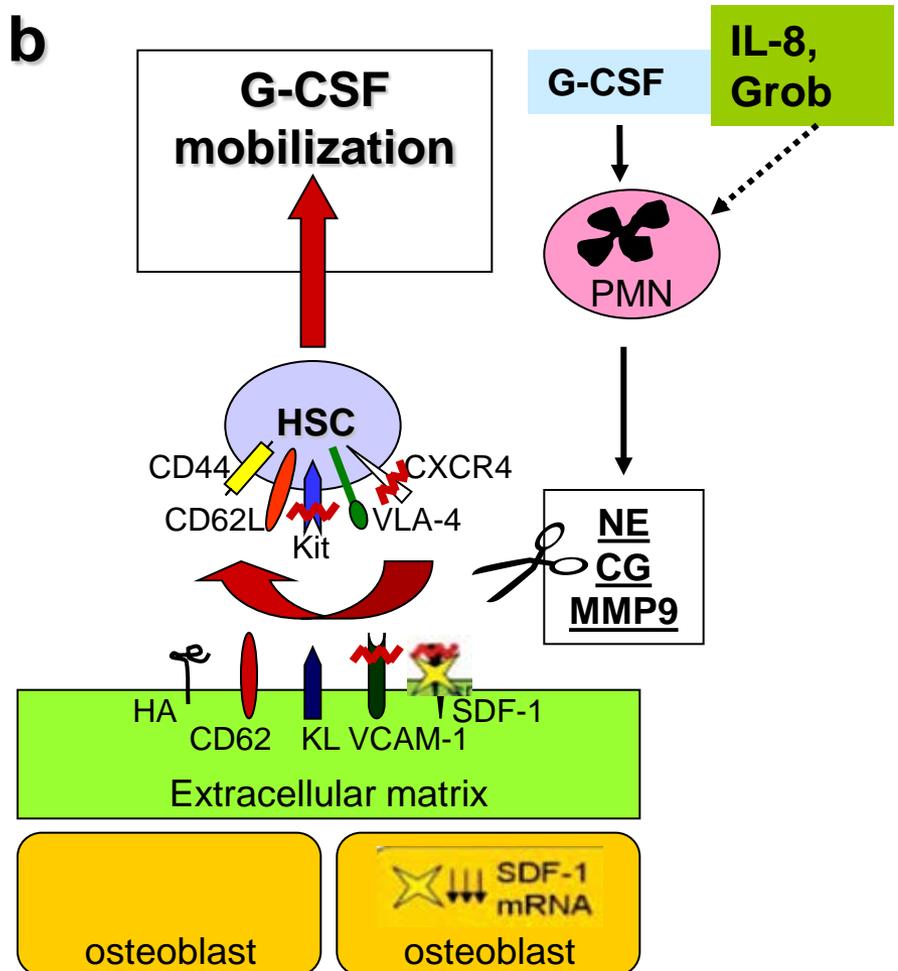

## The role of proteases (NE, CG, and MMP9)

**a**

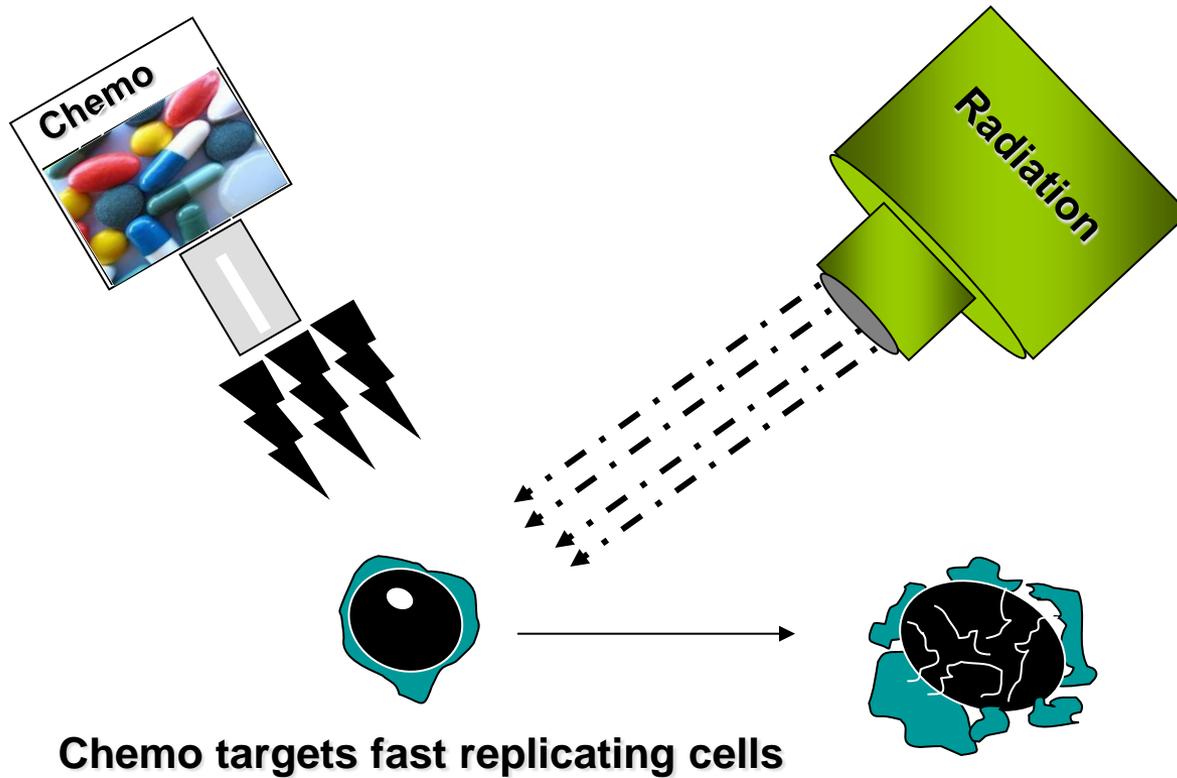

adhesive interactions  
between HSC and BM:  
cell adhesions molecules

**b**

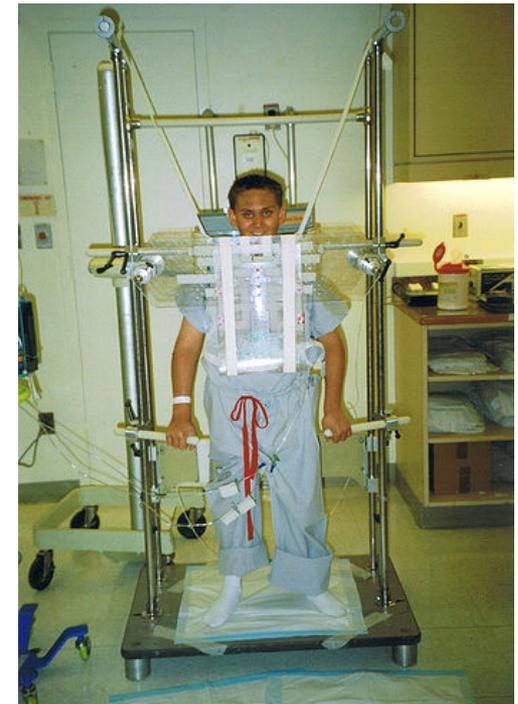

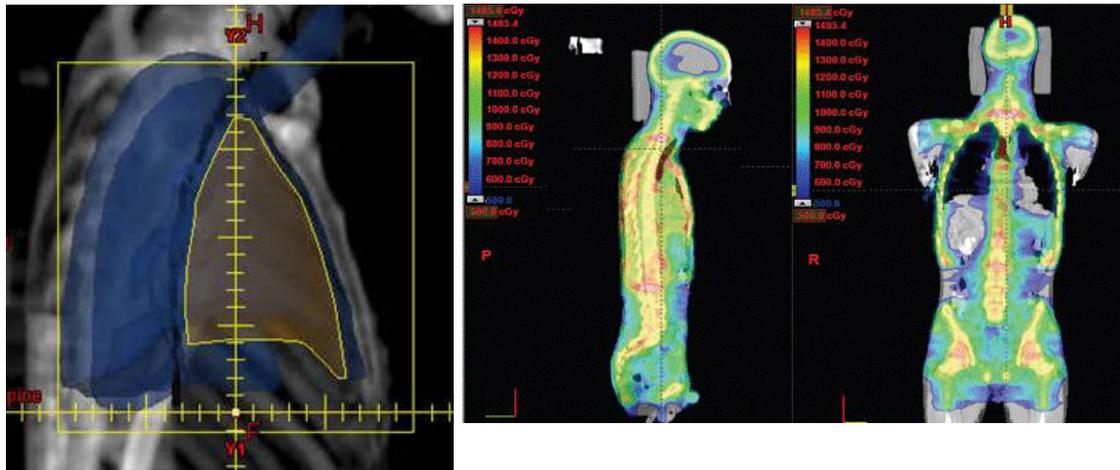

# *Stem Cell Transplant: Effects of Treatment*

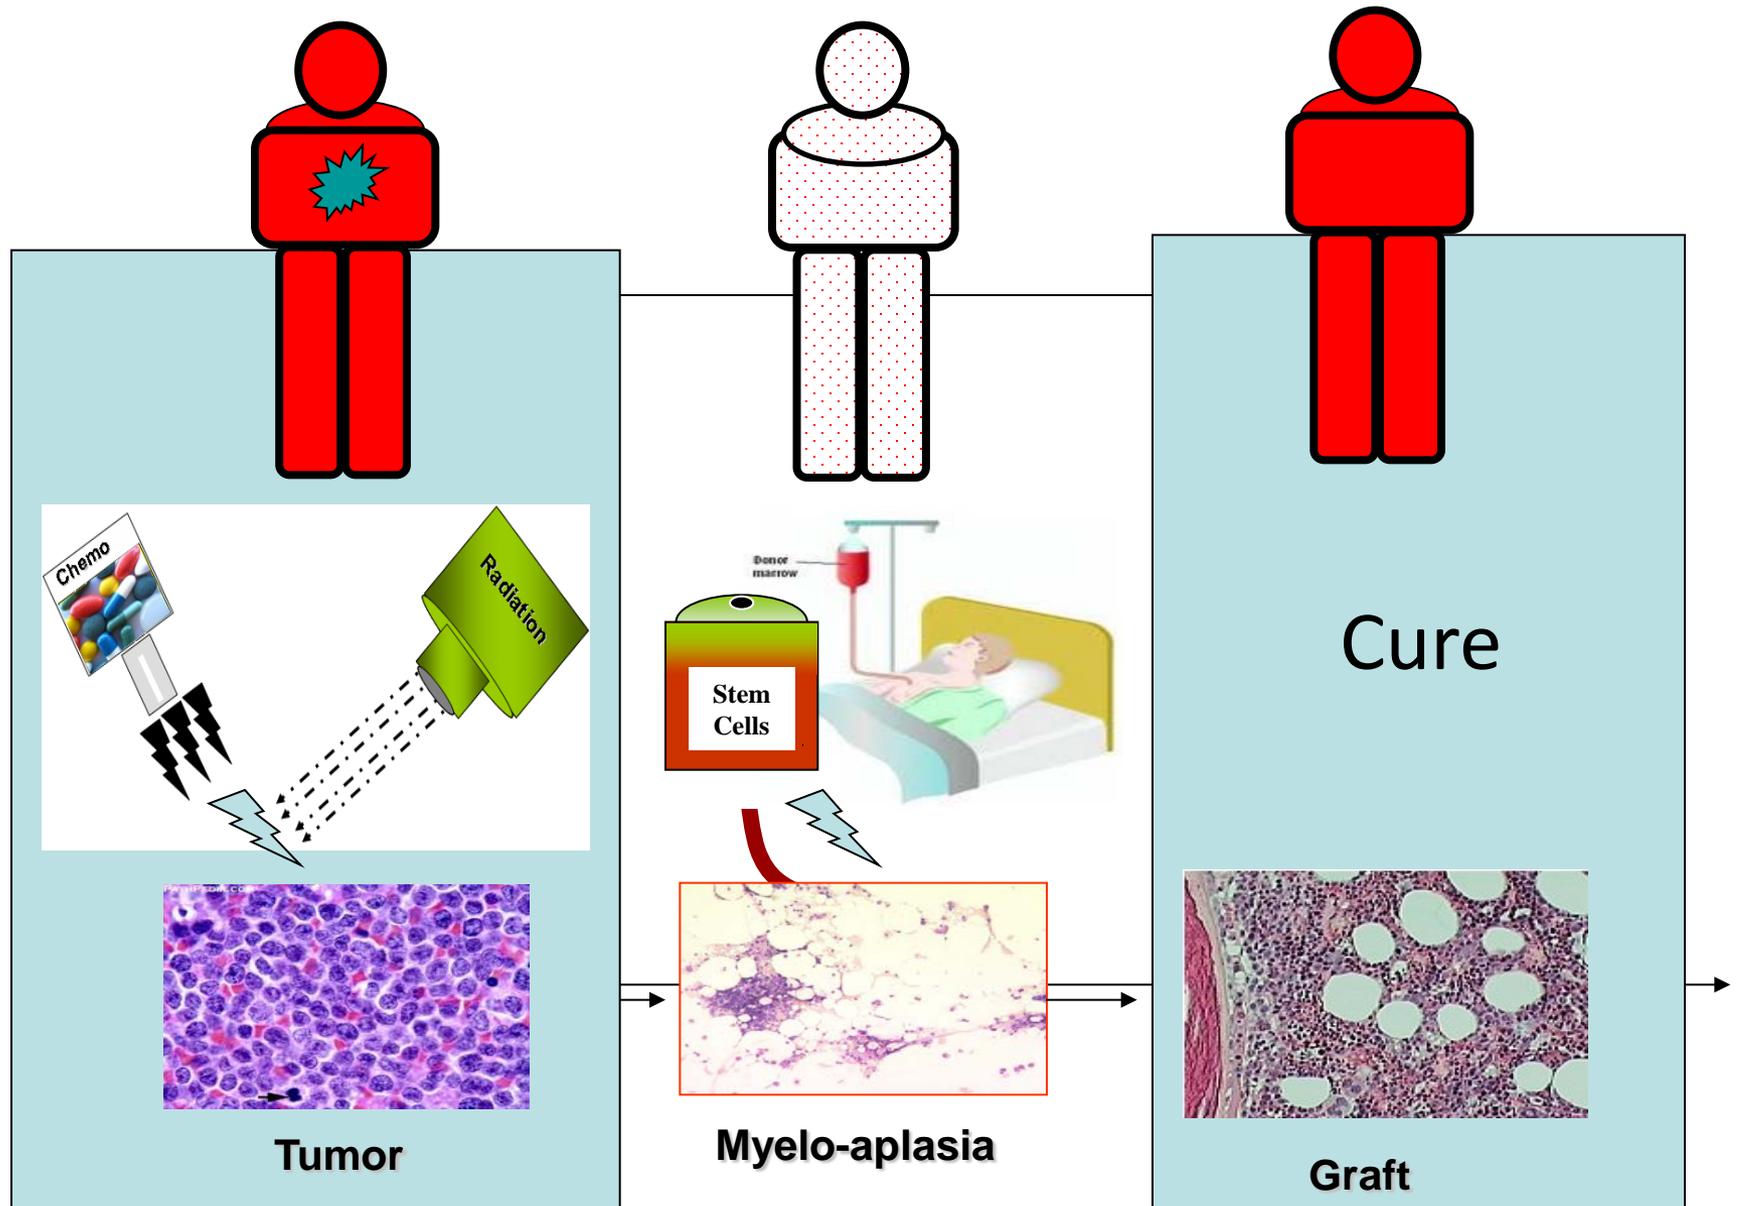

# Myelo-ablation

- Total body irradiation 10-12 Gy (fractionated) + cyclophosphamide
- Cyclophosphamide + busulfan

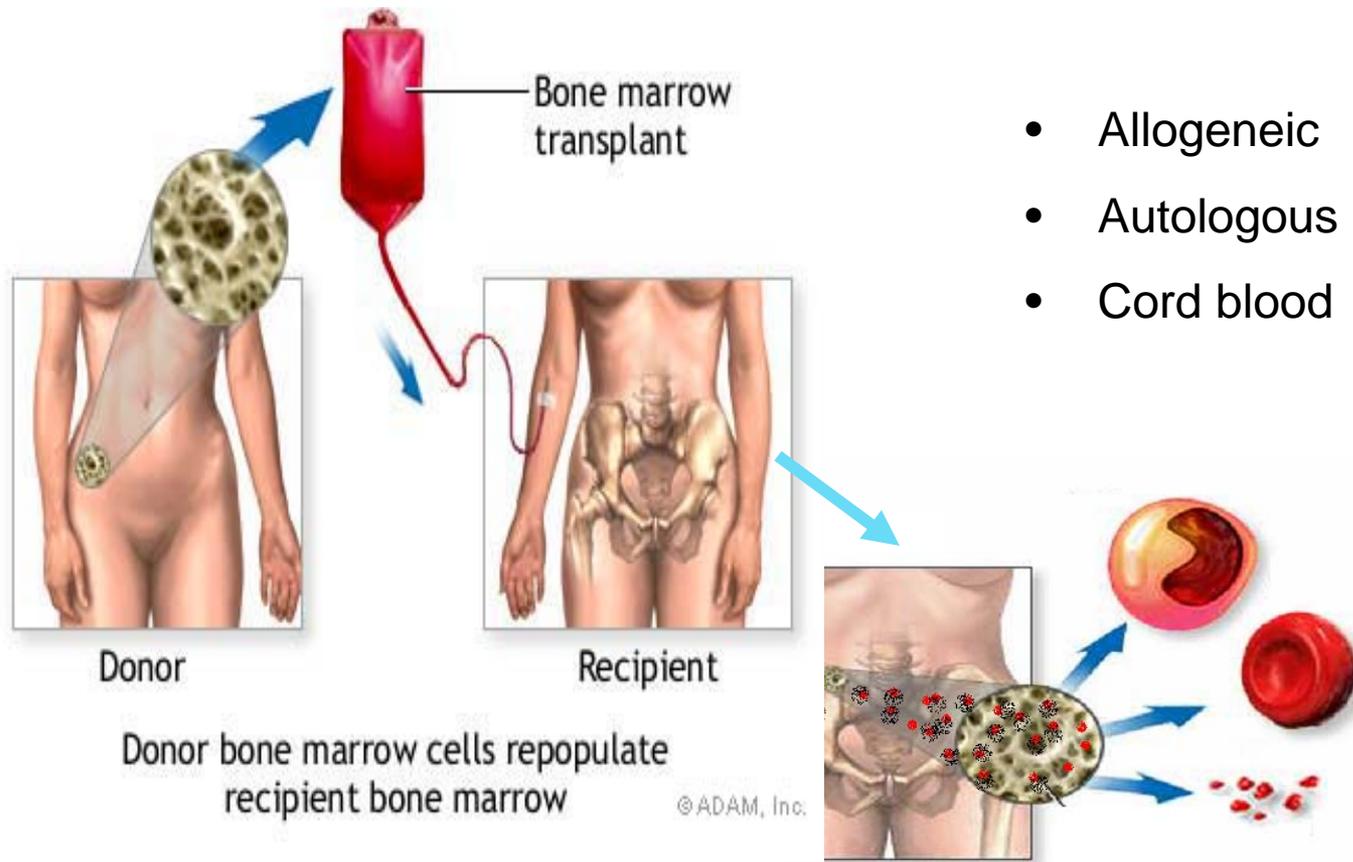

Nb 4.5 Gy fatal in 50% exposed individuals

# Rational of BMT

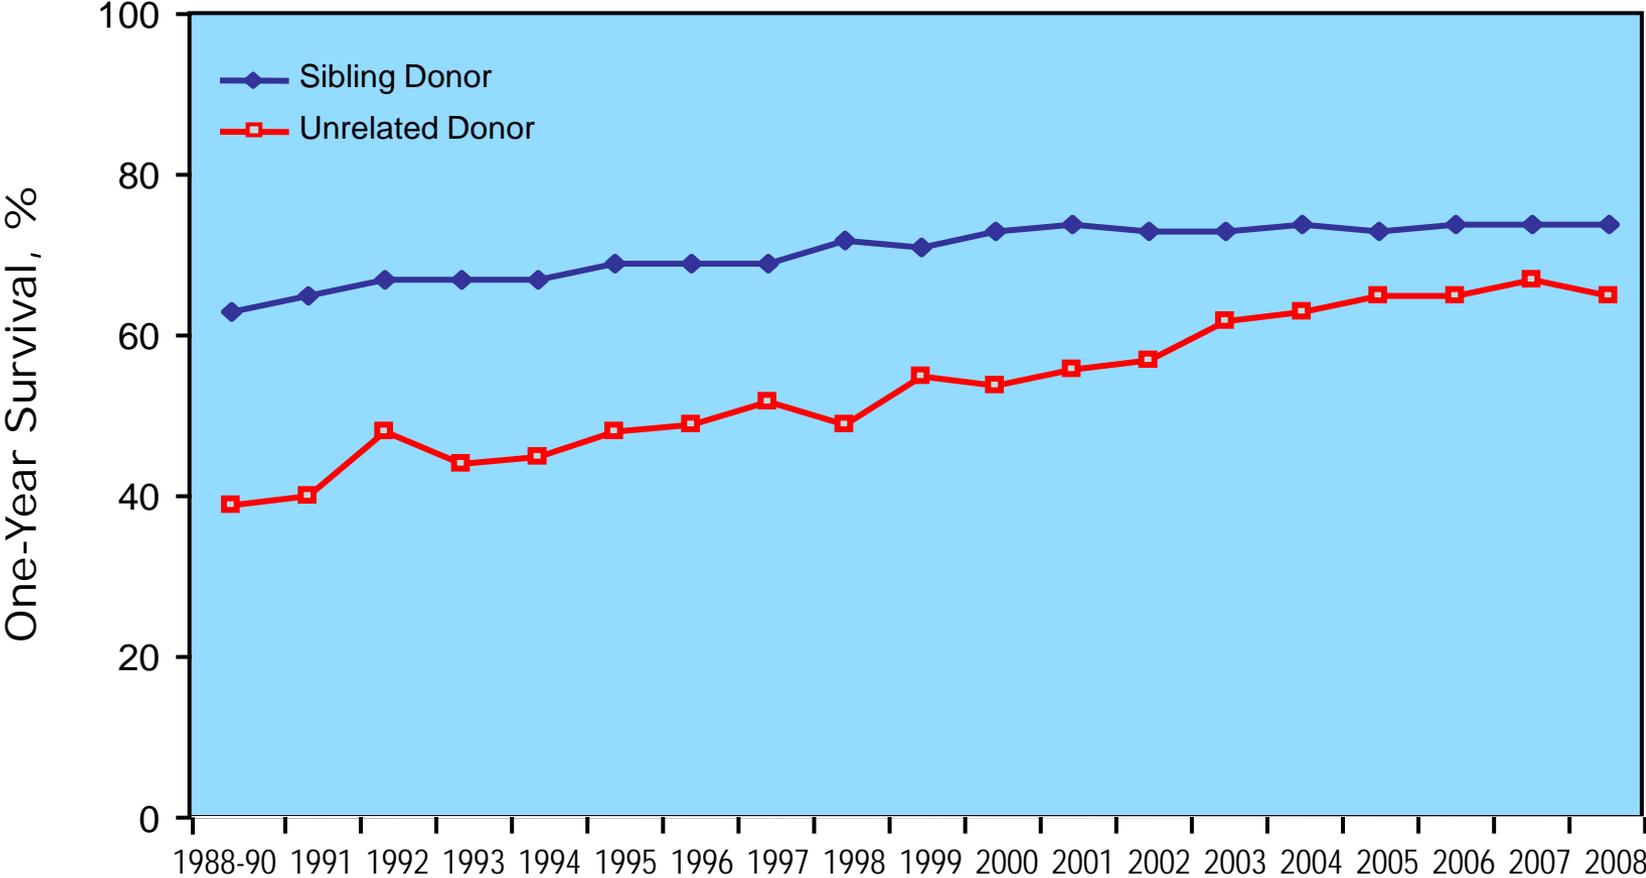

# Types of stem cell for transplantation

# BMT/ PBSC Transplants: Indications

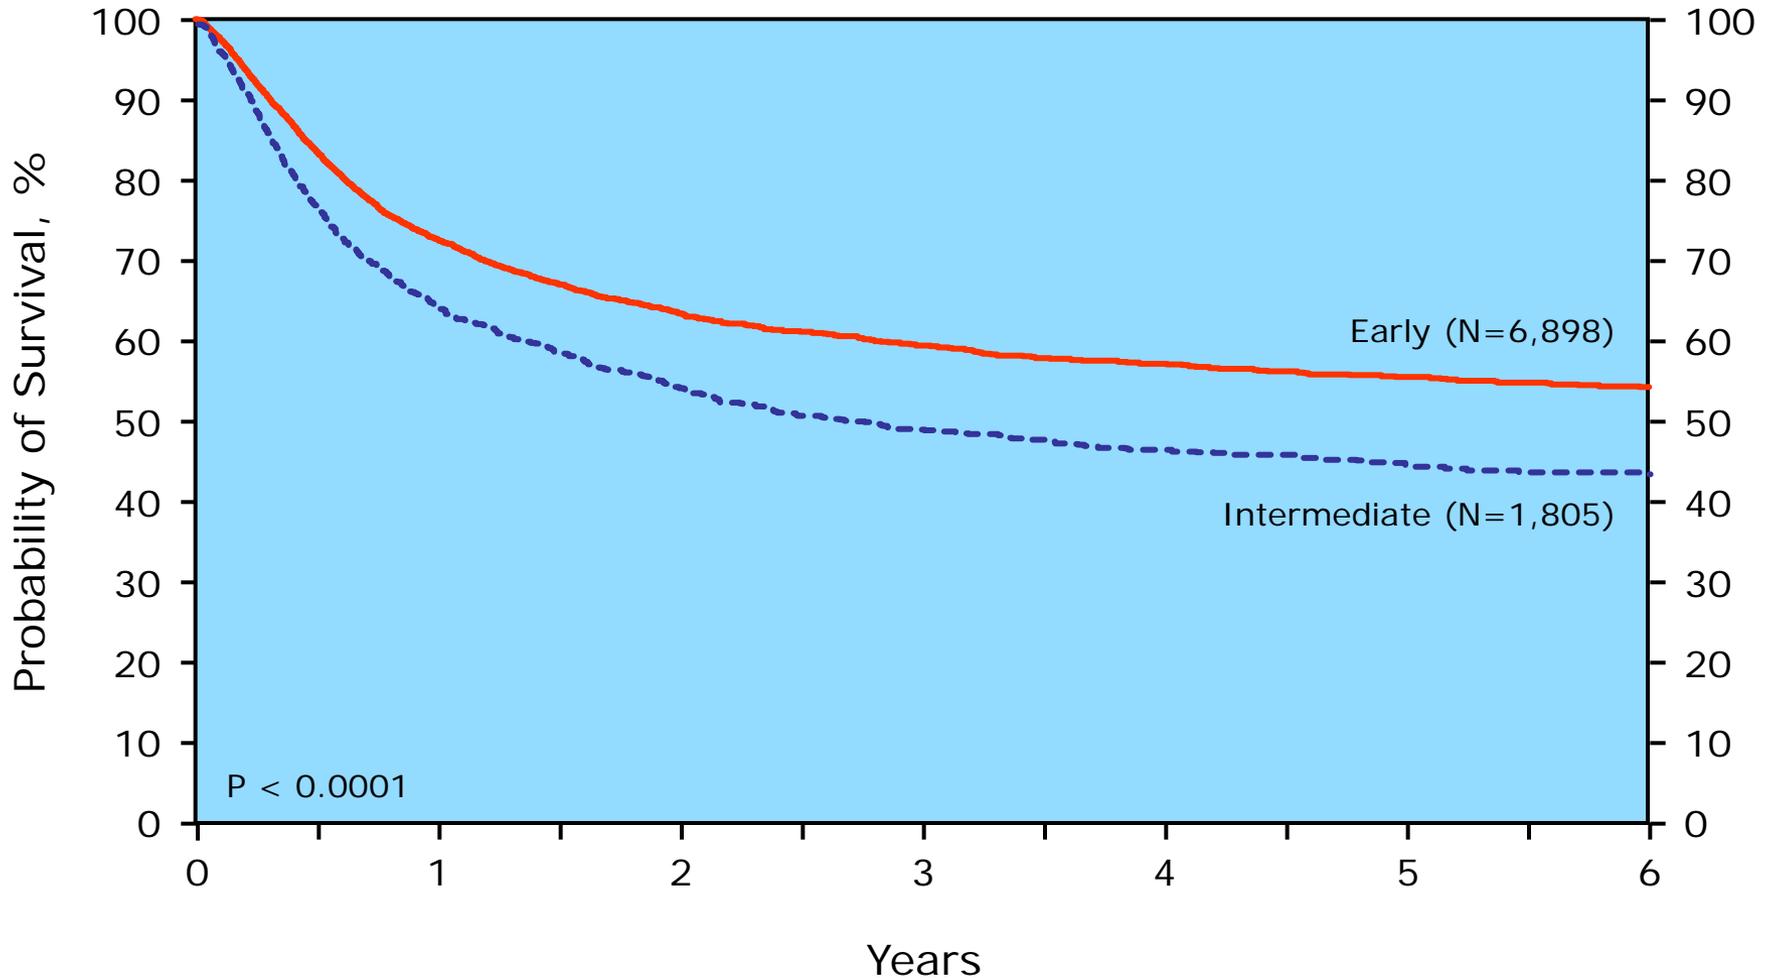

- Leukemias (acute and chronic)
- Lymphomas (Hodgkin's and non-Hodgkin's)
- Multiple myeloma
- Myelodysplastic and myeloproliferative disease
  - (myelofibrosis, polycythemia vera, essential thrombocytosis)
- Aplastic anemia
- Metastatic breast cancer \*
- Some metabolic diseases
- childhood cancers (neuroblastoma, sarcomas, high grade gliomas, Wilm's tumor)
- Congenital immunodeficiencies (CGD, SCID, Wiskott-Aldrich)
- Rheumatologic/autoimmune diseases (RA, jRA, Lupus, AIHA)
- Hemoglobinopathies
- Metabolic diseases (osteopetrosis, Hurler's, adrenaleukodystrophy)

# Trends of transplant survival RATE & succes , age <50 years, by year of transplant and graft source, 1988-2008

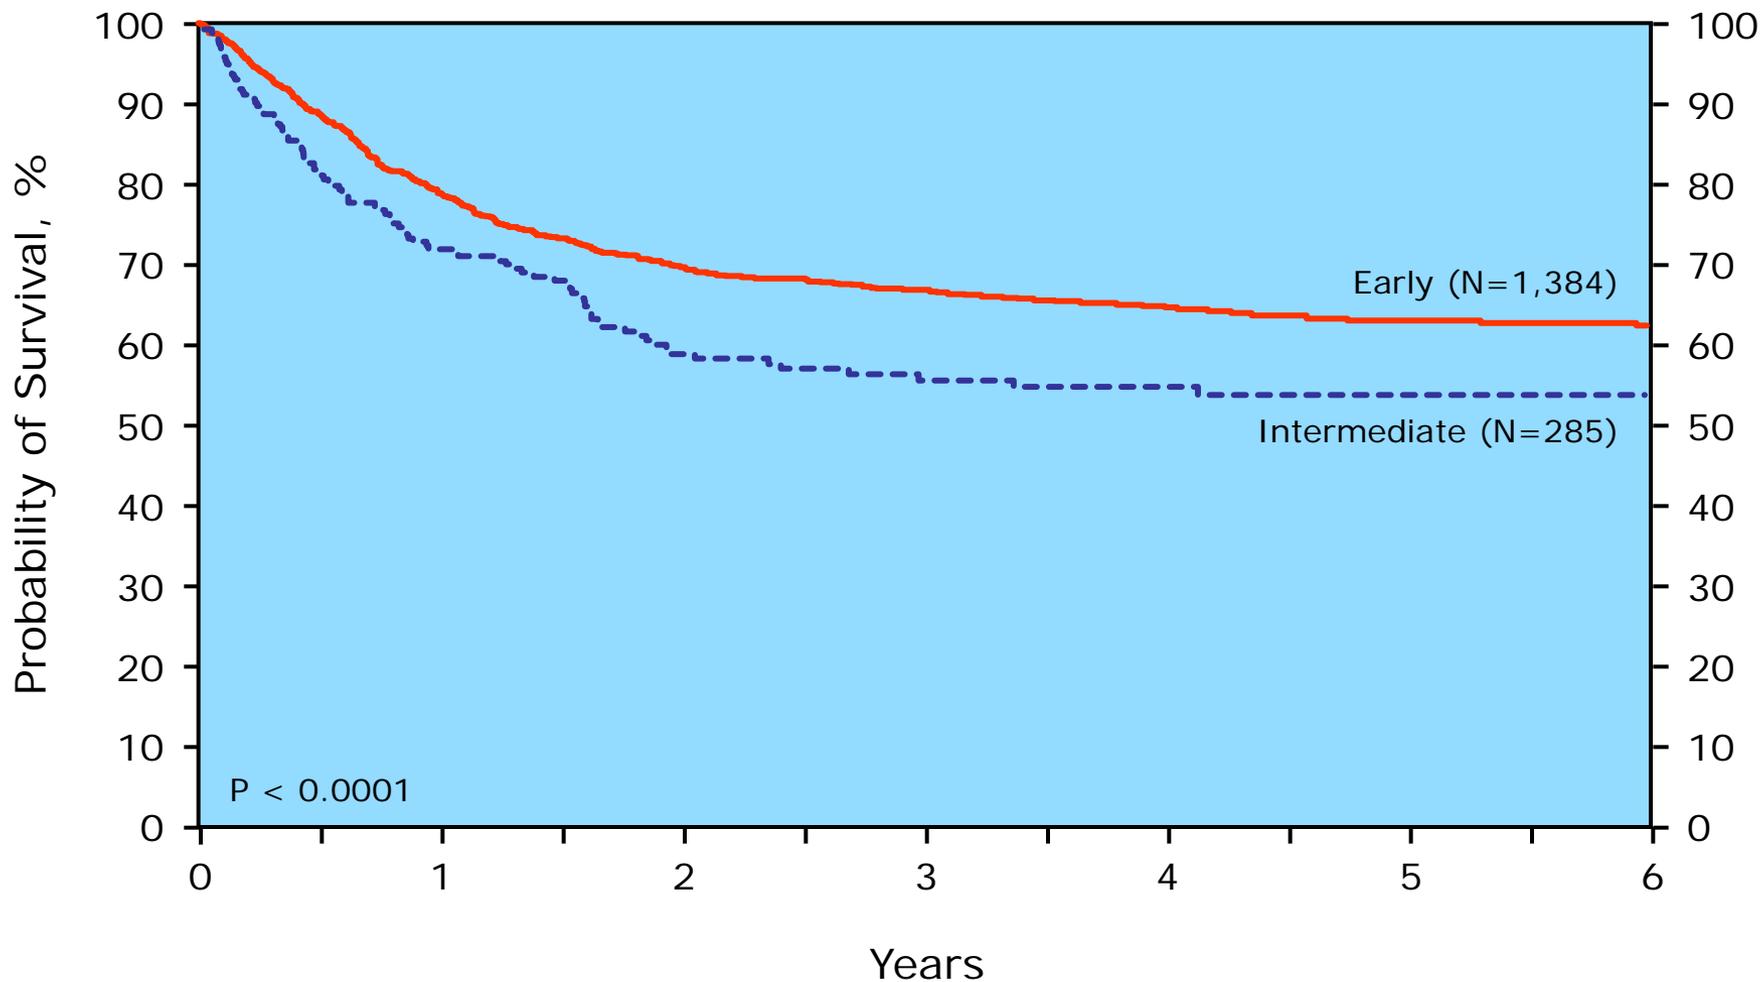

# Probability of survival for AML

HLA-matched sibling donor transplant, by disease status, 1998-2008

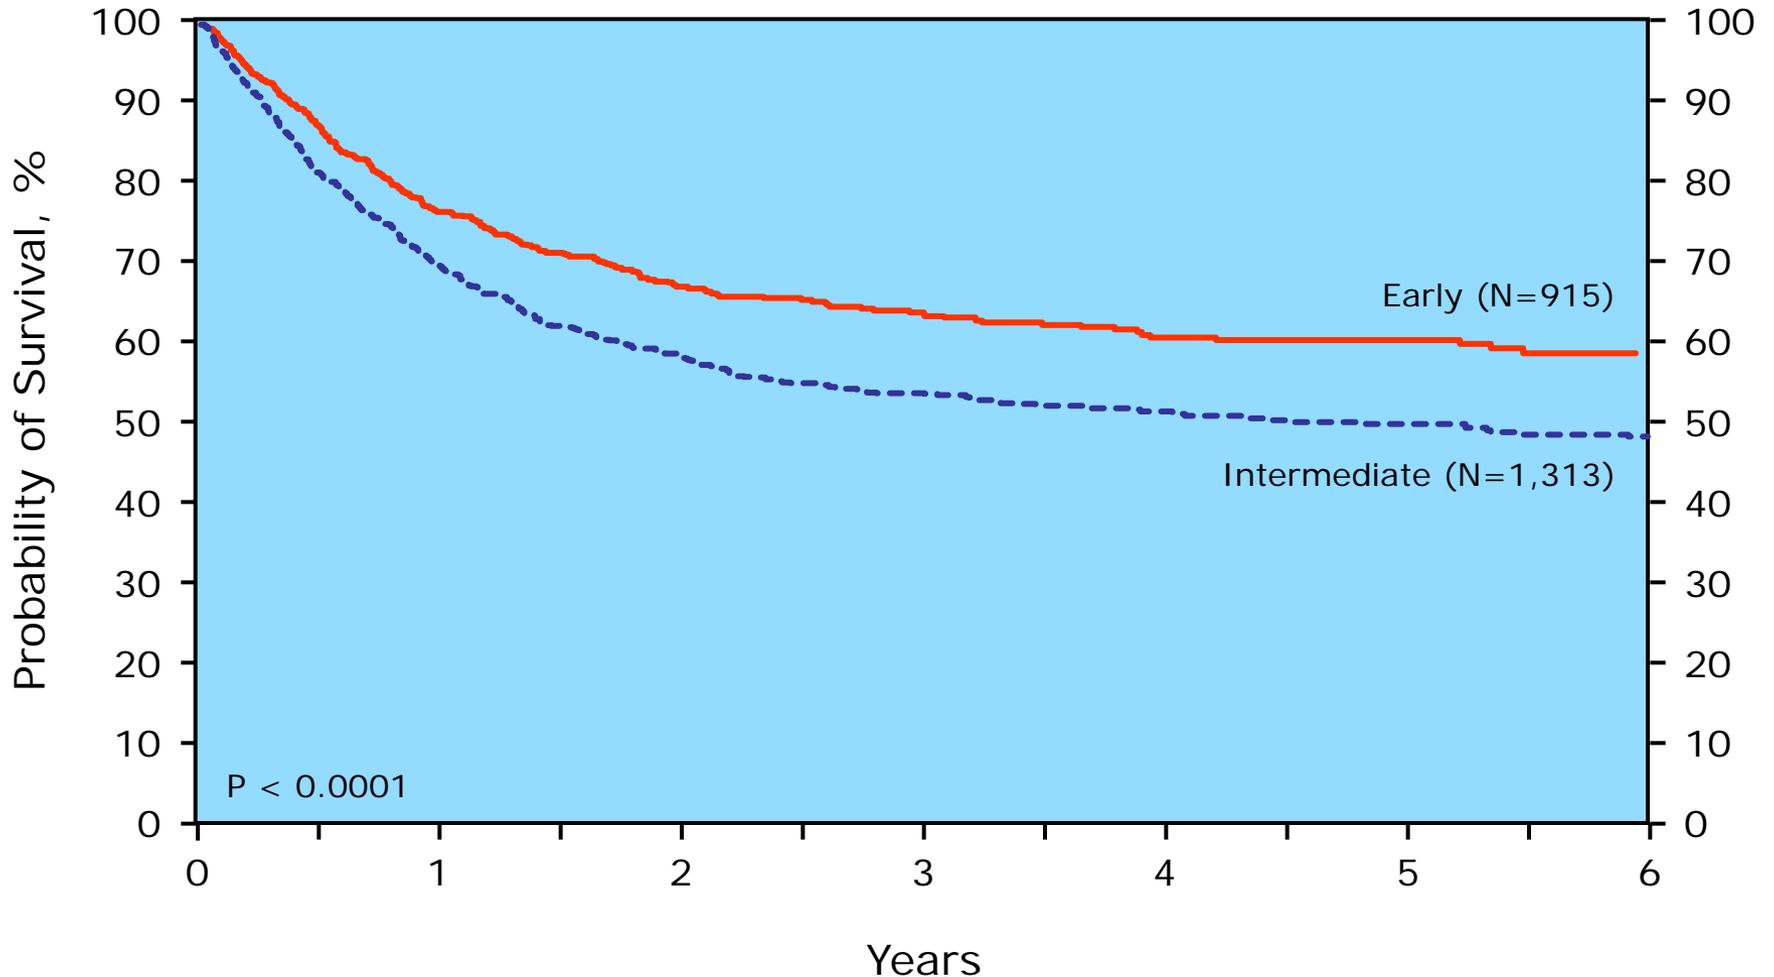

# Probability of survival for AML , HLA-matched sibling donor transplant, age <20 years, by disease status, 1998-2008

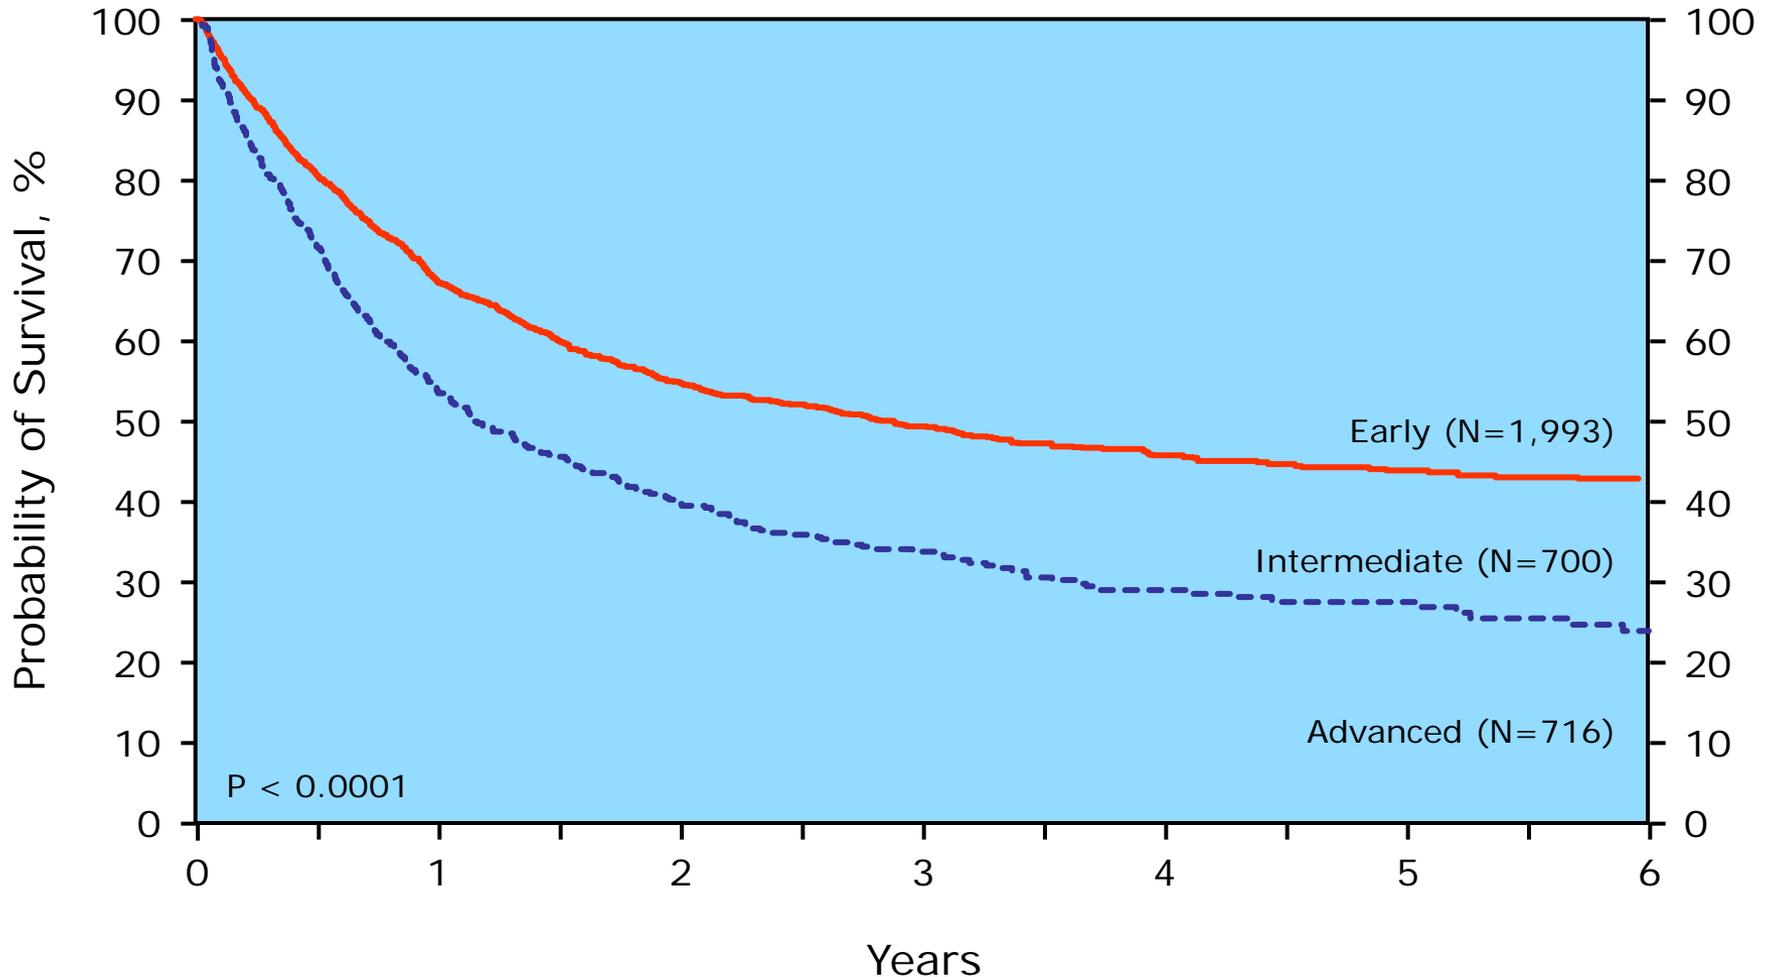

# Probability of survival for ALL

HLA-matched sibling donor transplant, age <20 years, by disease status, 1998-2008

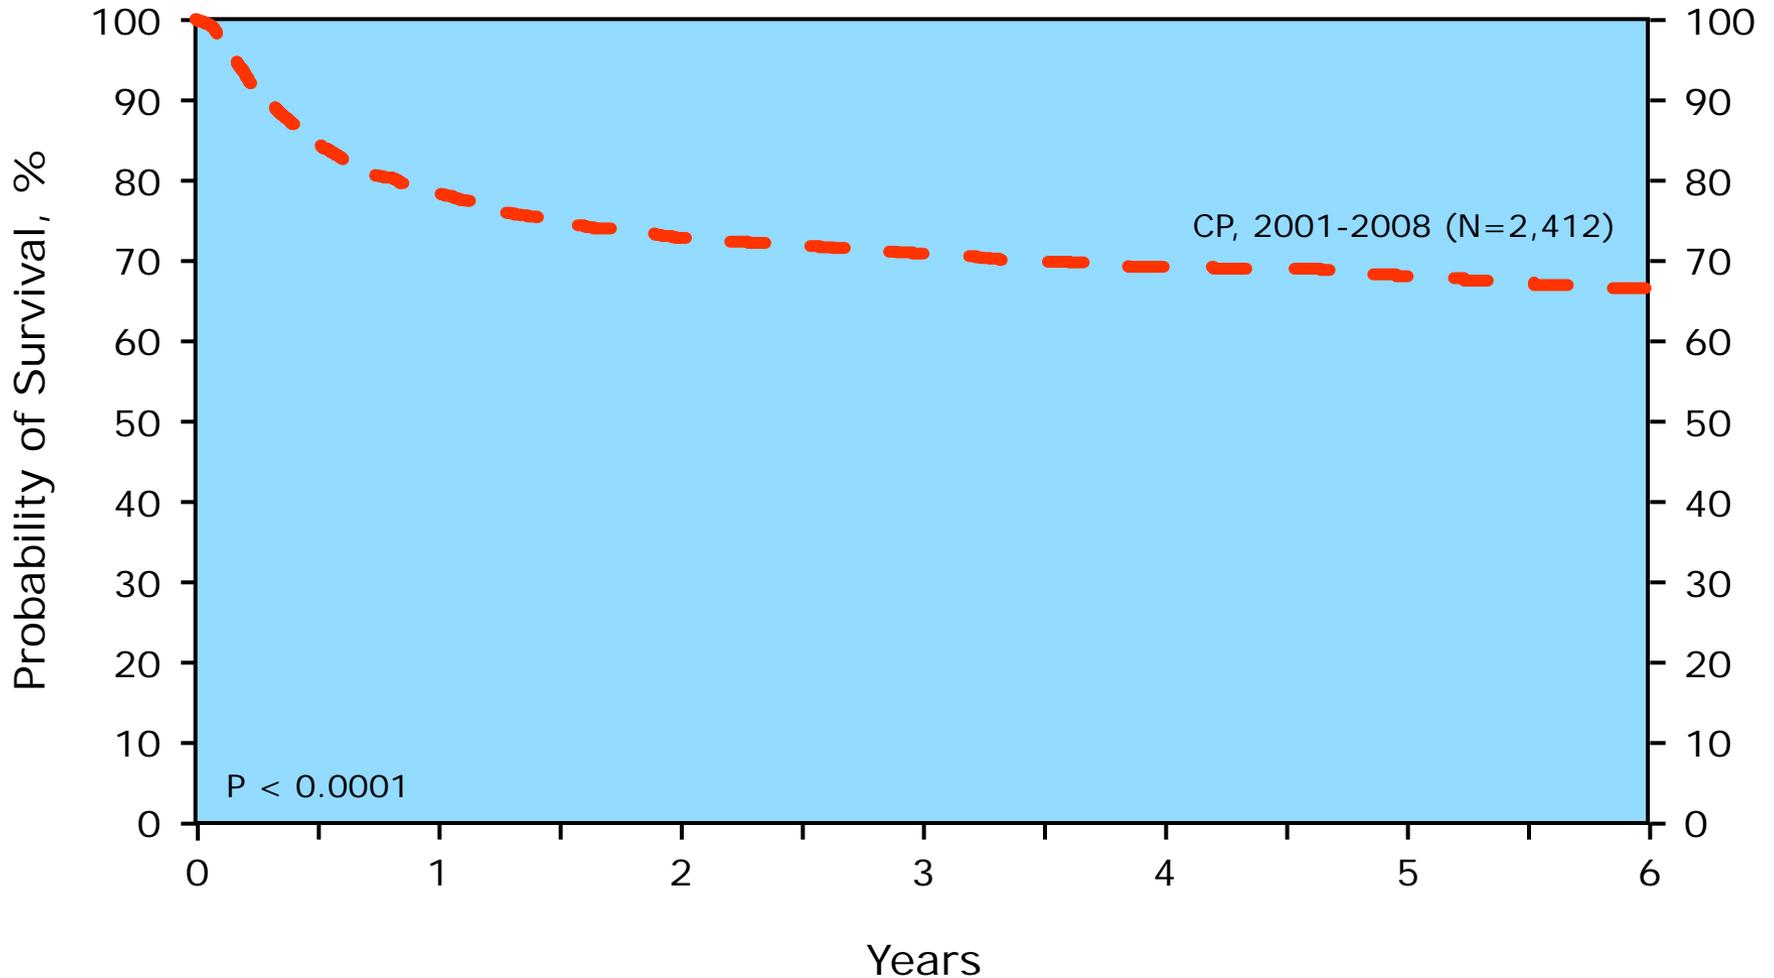

# Probability of survival for ALL

HLA-match sibling donor transplant, age  $\geq 20$  years, by disease status, 98-2008

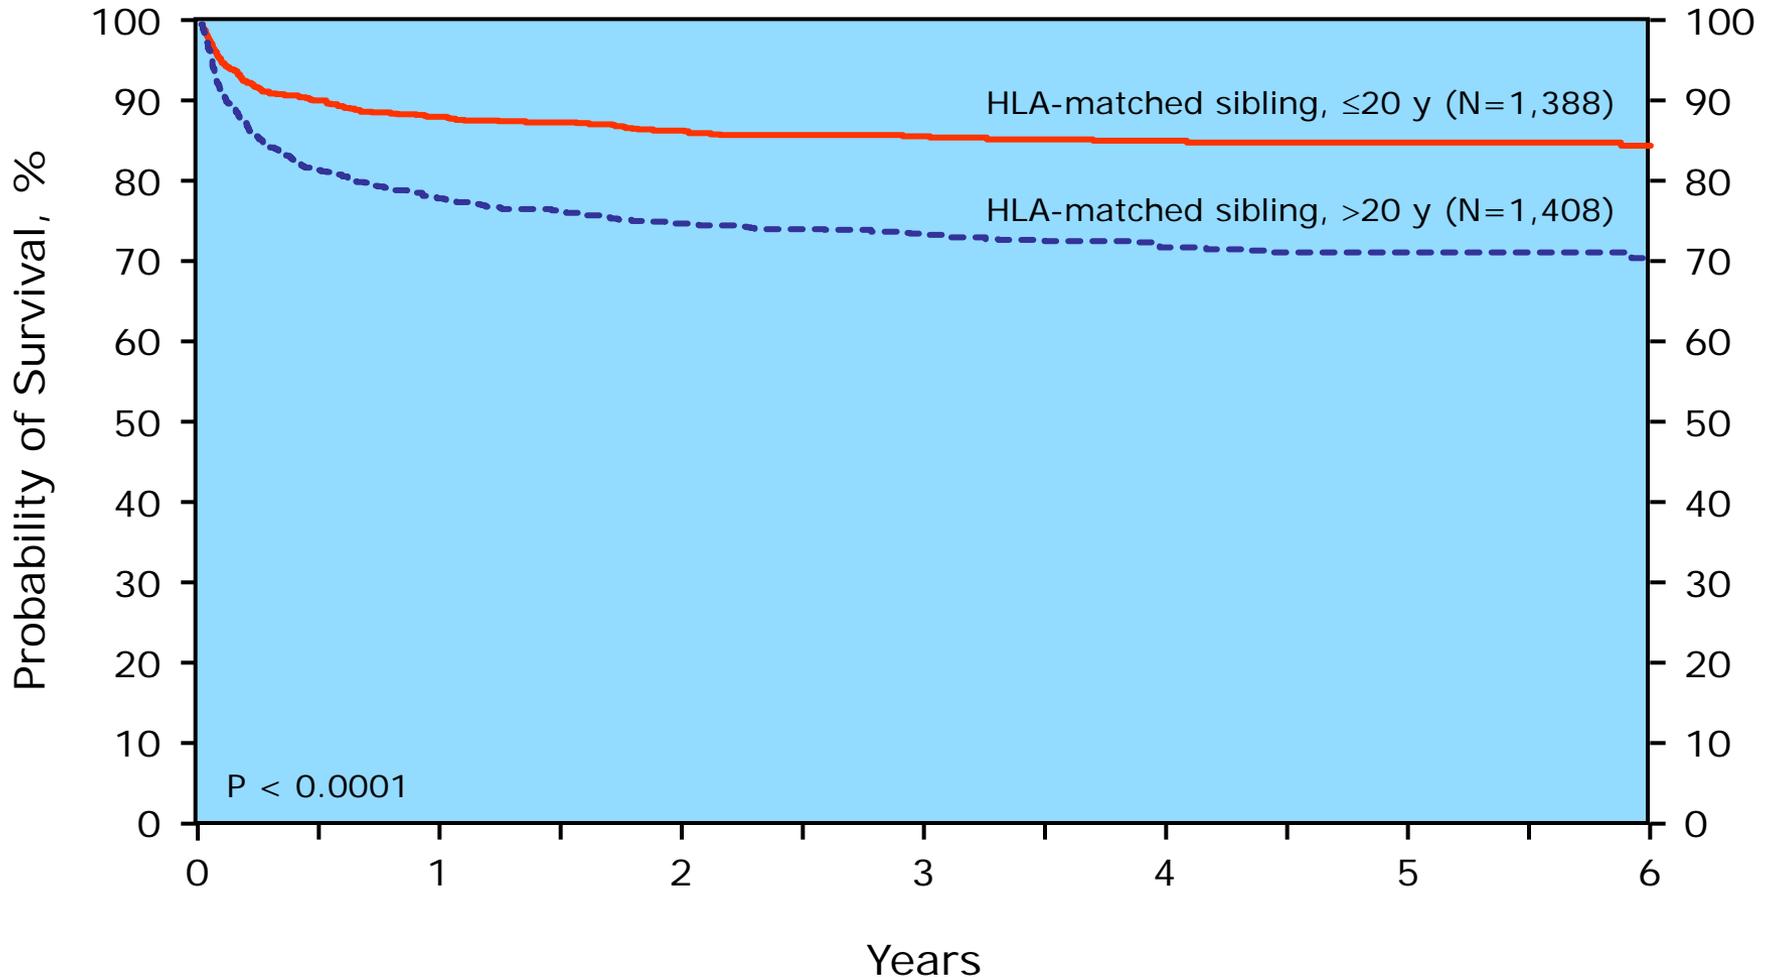

# Probability of survival for CML

HLA-match sibling donor transplant, by disease status and transplant year, 98-2008

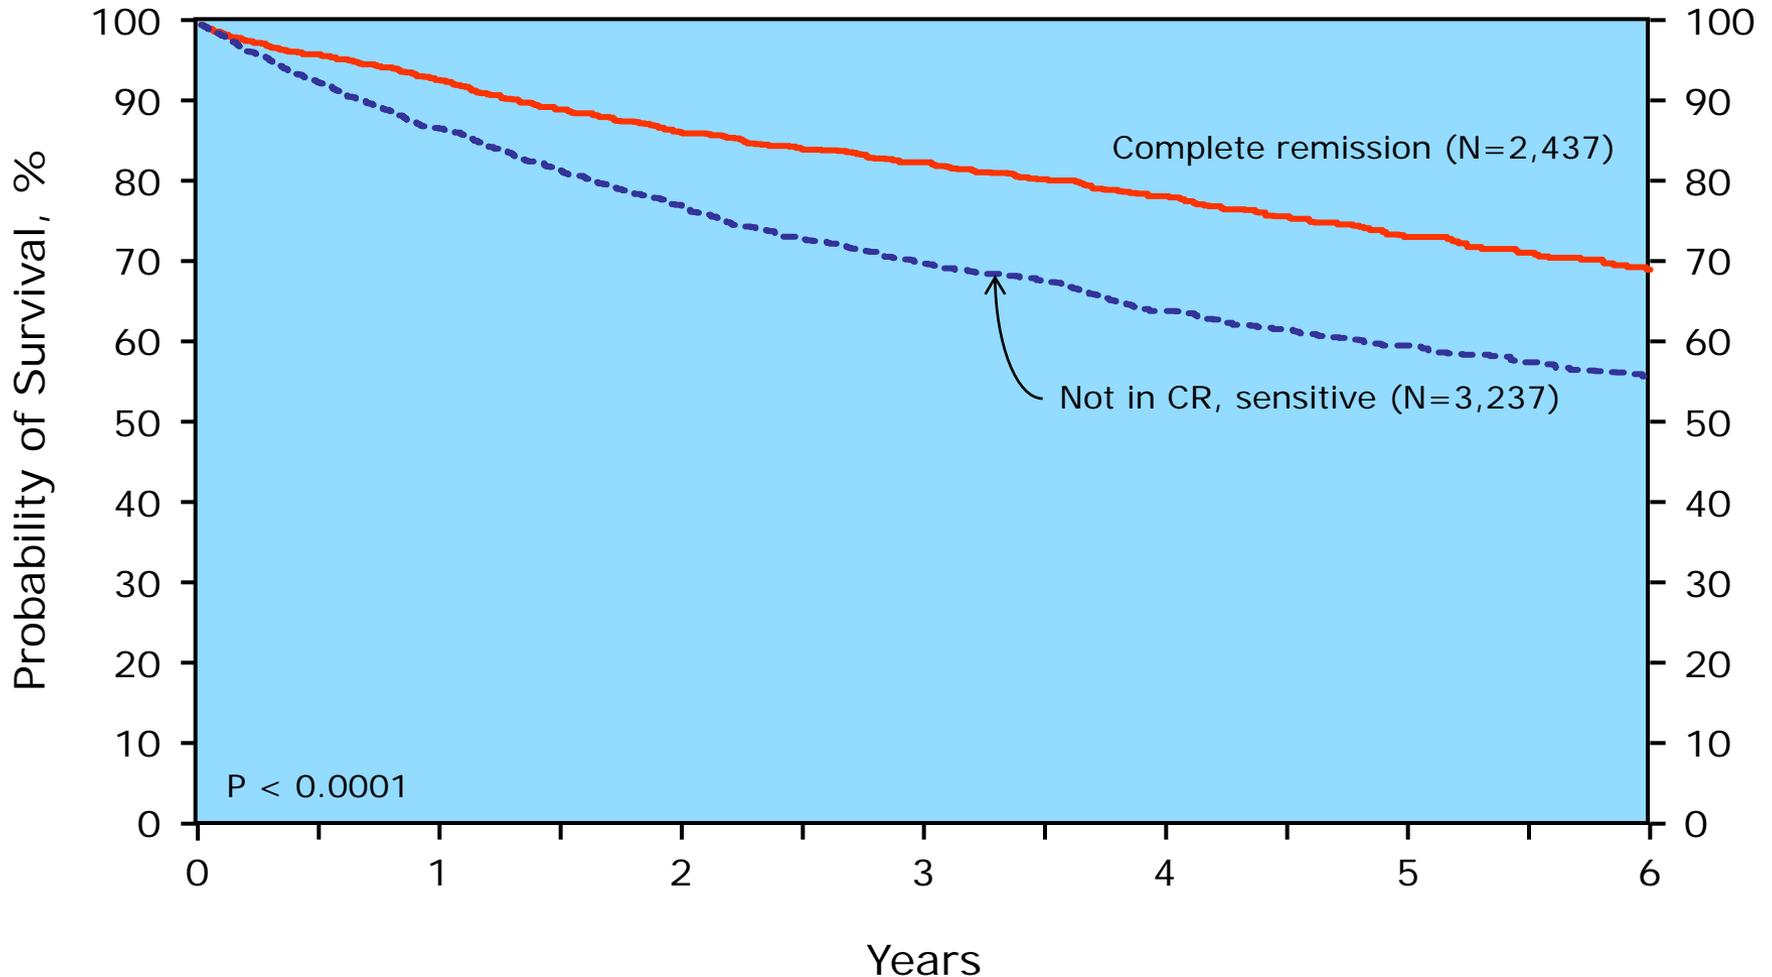

# Probability of survival for severe aplastic anemia allogeneic transplant for, by donor type and age, 1998-2008

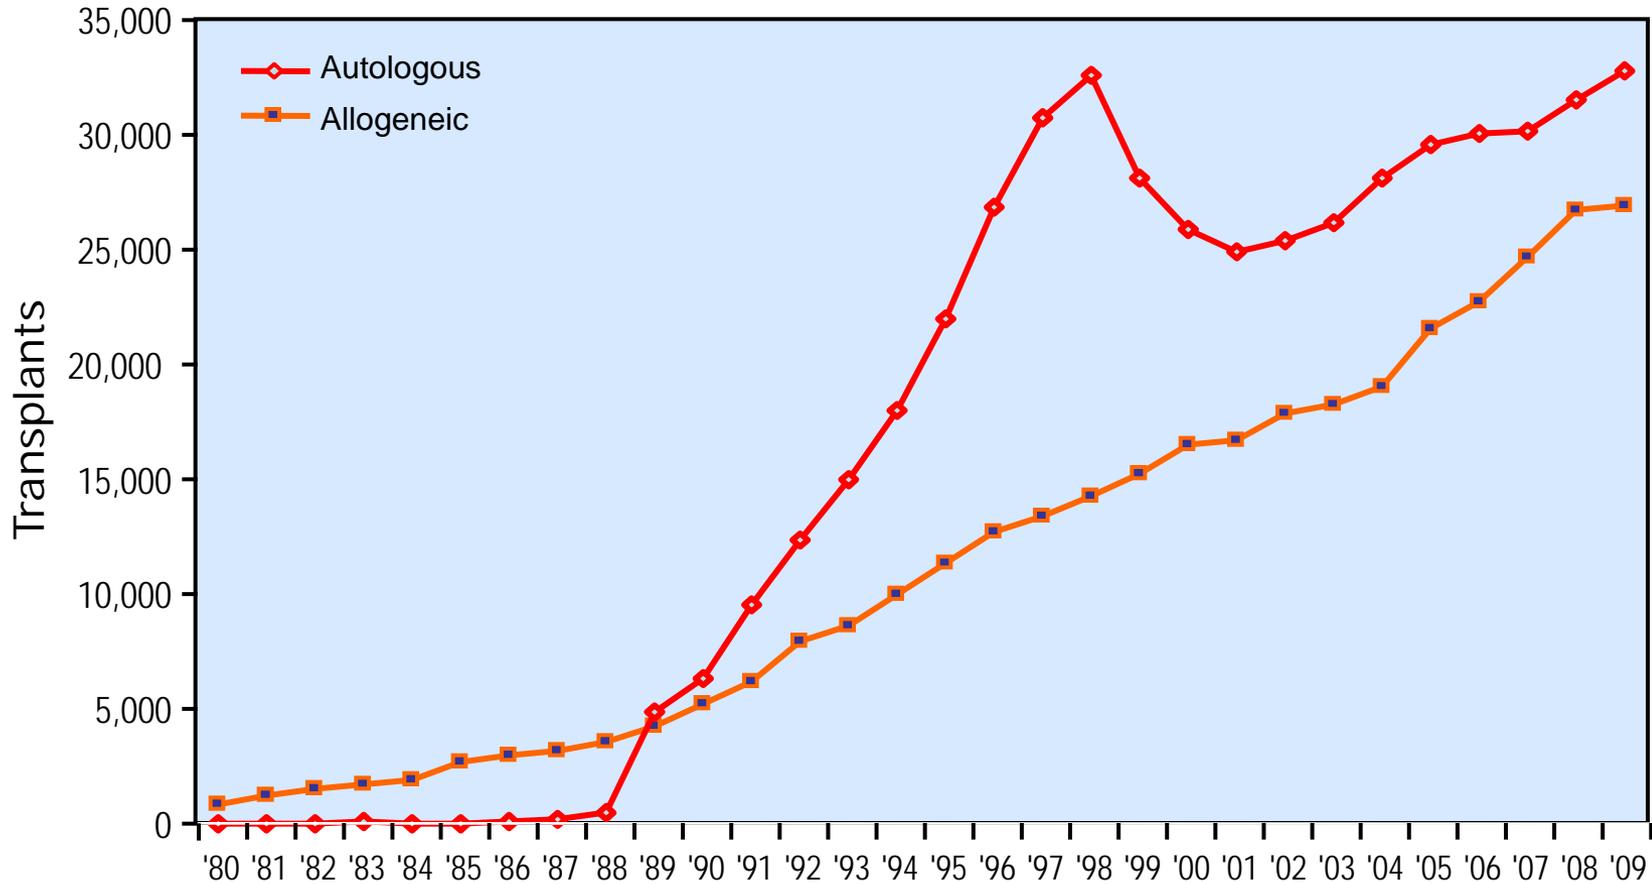

# Probability of survival for Hodgkin disease

## autologous transplant , by disease status, 1998-2008

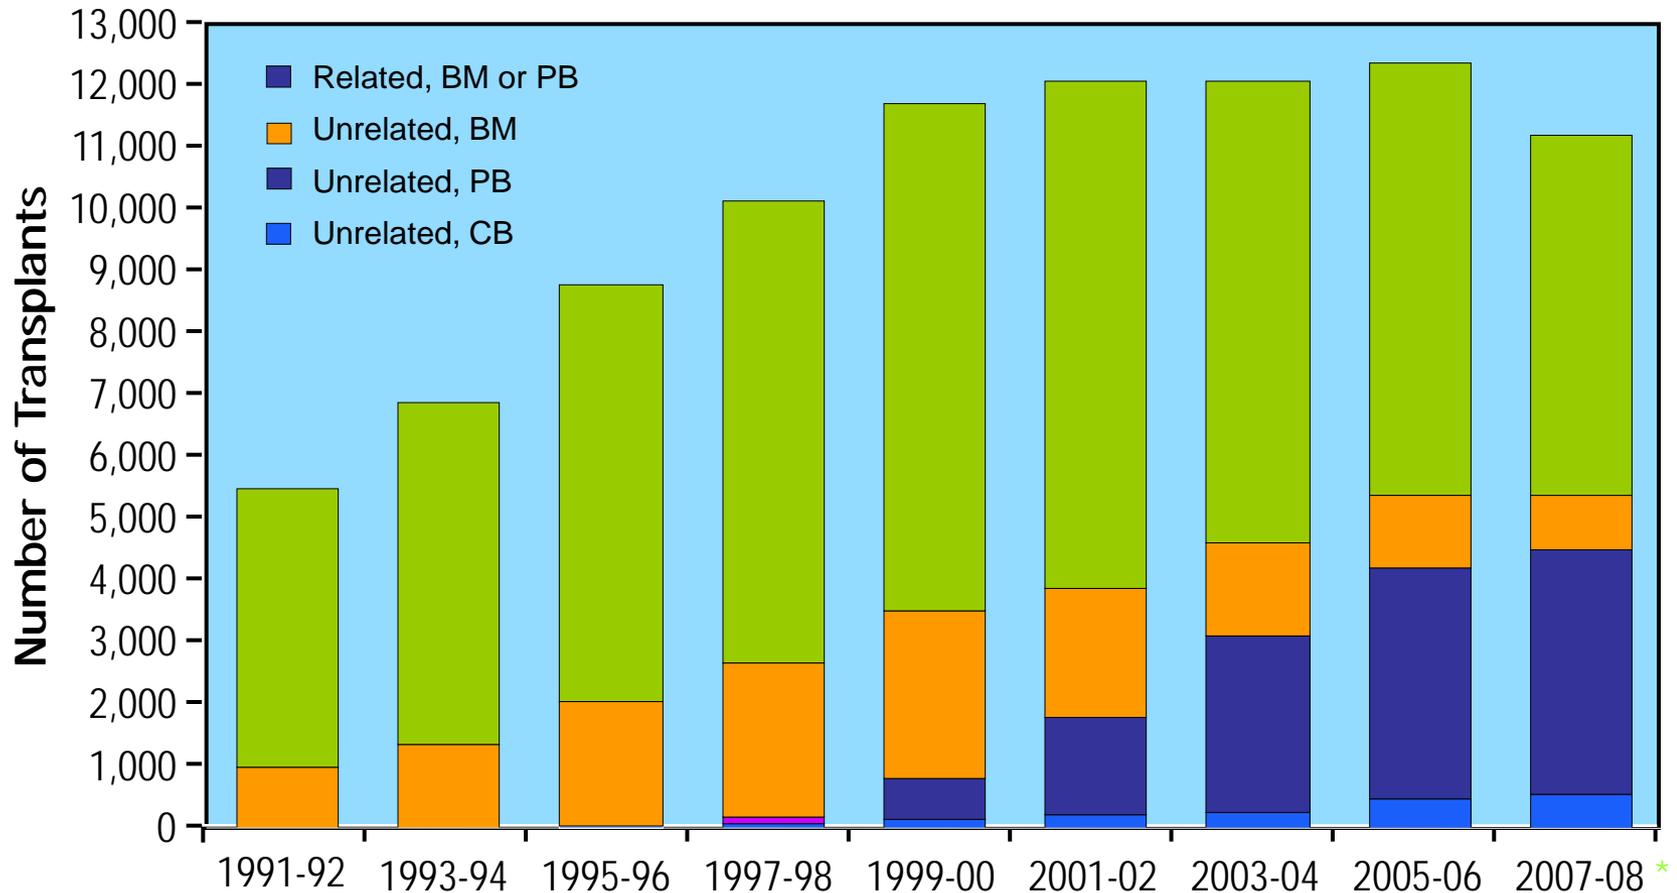

# Transplant Activity Worldwide 1980-2009

# Allogeneic transplant donor type

in patients >20 years, by and graft source, registered with CIBMTR, 1991-2008

\* Data incomplete

# European Transplant Activity 2010

## HSCT - rates in Europe 2010

Total transplants (all)

per 10 million

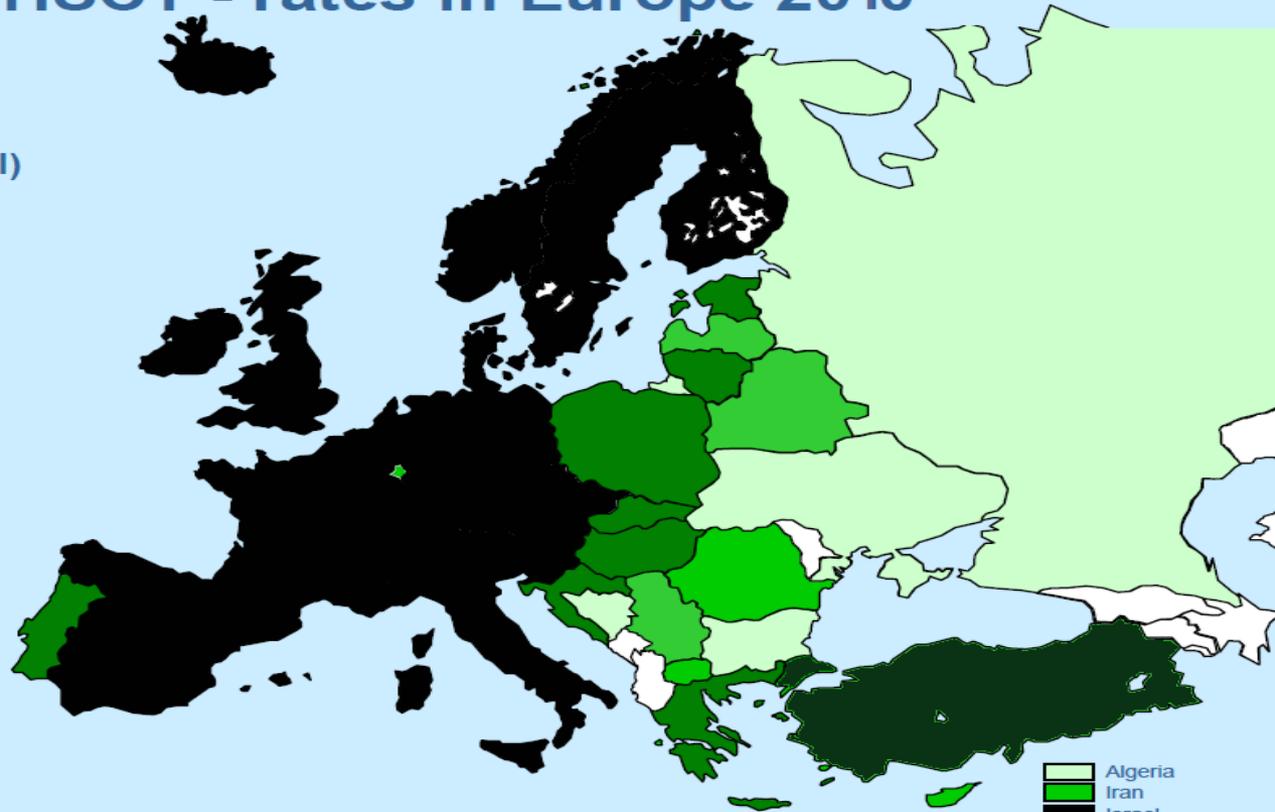

0 or no report

1 - 50

51 - 200

201 - 400

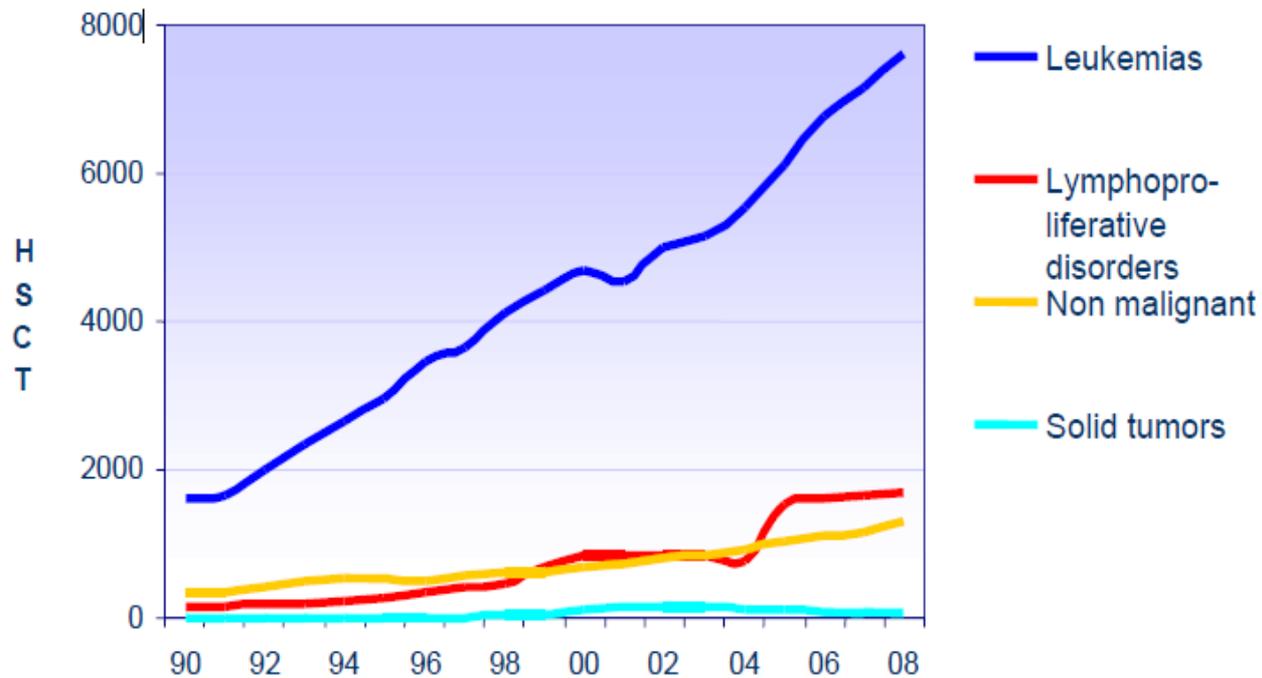

> 400
